34. The adhesive composition of claim 1 wherein the adhesive composition may be adhered to a Yankee dryer such that a creped product manufactured on the Yankee dryer will exhibit a peel force of about 300 to about 900 grams per 12 inches when using a papermaking machine having a speed of less than 150 feet per minute.

35. The adhesive composition of claim 1 wherein said composition is sprayable.

REMARKS

Claims 1-5, 26-31 and 34-35 are currently pending in this application. Claim 1 has been amended in this response to further clarify the nature of the present invention. The amendment does not constitute new matter, nor does the amendment narrow the scope of the claimed subject matter.

Claim 1 has been amended to recite that the claimed composition is releasably adhesive, and new claim 34 recites a quantitative measure of this characteristic. The releasable nature of the disclosed creping adhesive is set forth in the specification at numerous locations, as the very nature of the adhesive is that it will hold the creped product on a Yankee dryer for a brief period of time (less than 1 second) and then release the creped product when tension is applied to remove that product from the Yankee dryer. A quantitative measure of this releasable characteristic is the "peel force" which is set forth at page 11 of the specification, lines 15 to 20, and recited in new claim 34.
